Swinging Gate Ramp

Swinging Gate Ramp Training Manual

The Swinging Gate Ramp (SGR) is designed to allow passengers to board and deplane without traversing aircraft steps.

The SGR is usable on the following aircraft:

- CRJ 200
- CRJ 700
- ERJ 145

Note: When the aircraft is correctly parked on the “T” the SGR will properly mate to both aircraft types. When the Upper Bridge of the SGR is properly positioned to the CRJ 700, the bridge will be level (or slightly slanted, depending on aircraft load). When the Upper Bridge of the SGR is properly positioned to the CRJ 200, the Upper Bridge will decline toward the galley floor.
